JOB POSTING

Position: Data Analyst

Job Description:

Develop operational solutions using statistical analysis, simulation, and optimization. Utilize PowerBI and ERP dashboard to ensure material supply and production schedule. Conduct modeling by simulating outcomes and calculating revenue, cost and profitability. Conduct series analysis and statistical tools to establish effective and precise forecasting strategies. Utilize data to formulate budget analysis and seek possibility for cost reduction. Define data requirements and gather and validate information, applying judgment and statistical tests. The primary worksite is CADILLAC, MI, but relocation is possible.

Requirements:

Master's degree in computer science or Info Science & Technology or related with 4 months experience as Analyst or Analytics Specialist or related.
